

Solution Requirements

Date	15 July 2026
Team ID	XXXXXX
Project Name	Human Development Index (HDI) Predictor
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>No login required</i>	Low
2	Authorization levels	<i>Public access</i>	Low
3	External interfaces	<i>Accept user inputs through web form</i>	High

4	Transactions processing	<i>Process input values and predict HDI</i>	High
5	Reporting	<i>Display HDI score and category</i>	High
6	Business rules, etc.	<i>Predict using Linear Regression model</i>	High
7	Compliance to laws or regulations	<i>Educational purpose only</i>	Medium
8	Other	<i>Data visualization support</i>	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
------	--------------	-------------------------	-------------------------------------

1	Performance & Speed	<i>Prediction should be fast</i>	<i><2 seconds</i>
2	Scalability	<i>Can handle multiple predictions</i>	<i>100+ requests</i>
3	Security & Data Privacy	<i>Validate numeric inputs</i>	<i>Safe input handling</i>
4	Reliability & Availability	<i>Stable Flask application</i>	<i>99% availability</i>
5	Usability & Accessibility	<i>Simple responsive UI</i>	<i>Easy navigation</i>
6	Other	<i>Maintainable code</i>	<i>Modular Python files</i>
